Kristiania Teglverk:

Preservation of architecture and ecology

A new annex to NATUR Vocational School and developing a flower field at Bryn

The Architecture of Kristiania Teglverk is a result of its original function; the production of bricks. It was a streamlined production relating to nature on many levels almost like a ecological cycle. Some of the traces of this production were lost with the closure of the factory in the 1960's, some is still inherited in the building.

Inspired from old drawings, a study trip to a brick factory museum in Denmark and archival documents; models were developed to discuss the production of bricks with the relation to the nature and in some cases how this process might be turned.

Diploma

Spring 2020

The Oslo School of Architecture and Design

Student **Jacob Emil Kligen Borg**

Tutors **Lisbeth Funck**
 Matthew Anderson

Kristiania Teglverk placed in the Flowerfield	4
Rays of artificial light coming out from the charcoal openings	6
Relationship between daylight and artificial light	8
Kristiania Teglverk construction model I	10
Kristiania Teglverk construction model II	12
Kristiania Teglverk construction model III	14
Situation model with chimney I	16
Situation model without chimney I	18
Situation model with chimney II	20
Situation model without chimney II	22
Situation model with chimney III	24
Situation model without chimney III	26
The chimney converted to a bird house	28
Drying cabins for bricks used as picnic shelter I	30
Drying cabins for bricks used as picnic shelter II	32
Drying cabins for bricks used as picnic shelter III	34
Memory of lift from Kristiania Teglverk used as a viewpoint in the landscape I	36
Memory of lift from Kristiania Teglverk used as a viewpoint in the landscape II	38
Lost transportation bridge from the clay extraction to Kristiania Teglverk I	40
Lost transportation bridge from the clay extraction to Kristiania Teglverk II	42
Lost transportation bridge from the clay extraction to Kristiania Teglverk III	44
Imagined Eco-heritage Masterplan	46
