## Introduction

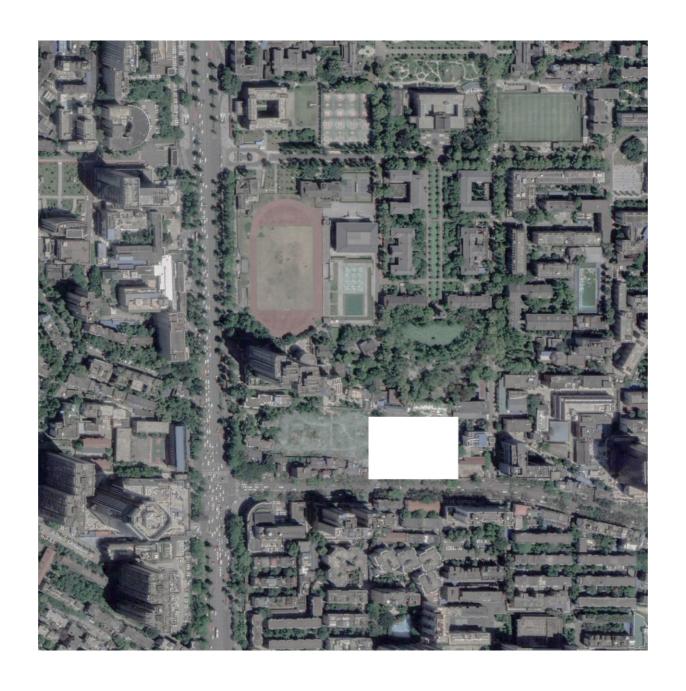

Our life is constant. We are doing similar things every day, and it may take a long time for an unexpected event to happen. Until the outbreak of the epidemic in 2020, we were forced to be isolated, we were trapped in our individual rooms. Until I recovered from the initial shock, I tried to think about loneliness seriously.

Even if there was no epidemic, we would still lock ourselves in a self-protective shell, which is invisible but indestructible. We are complex animals driven by emotions. On the one hand, we love loneliness, it allows us to think about the direction we deeply want. But we also yearn for social approval. We love the first grace of the morning sun, but we also enjoy dancing under the moon.

I hope that this living space can provide a suitable environment that allows us to mount loneliness, to have a chance to think peacefully, which also allows us to be sociable, to enjoy spending the dusk with friends drinking beer.

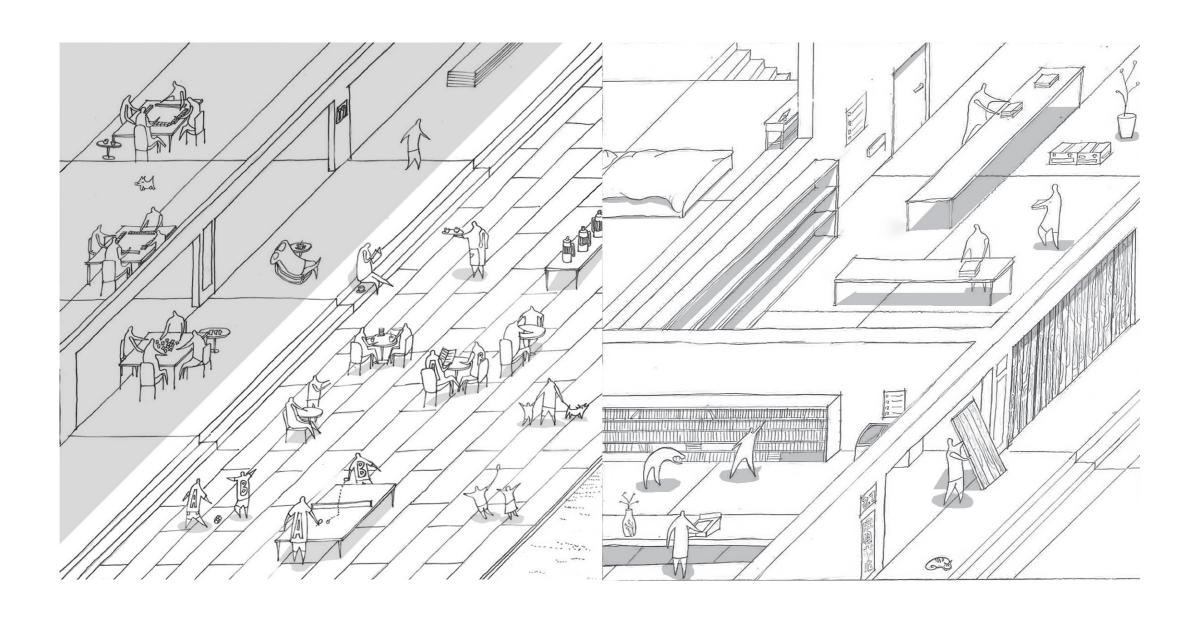

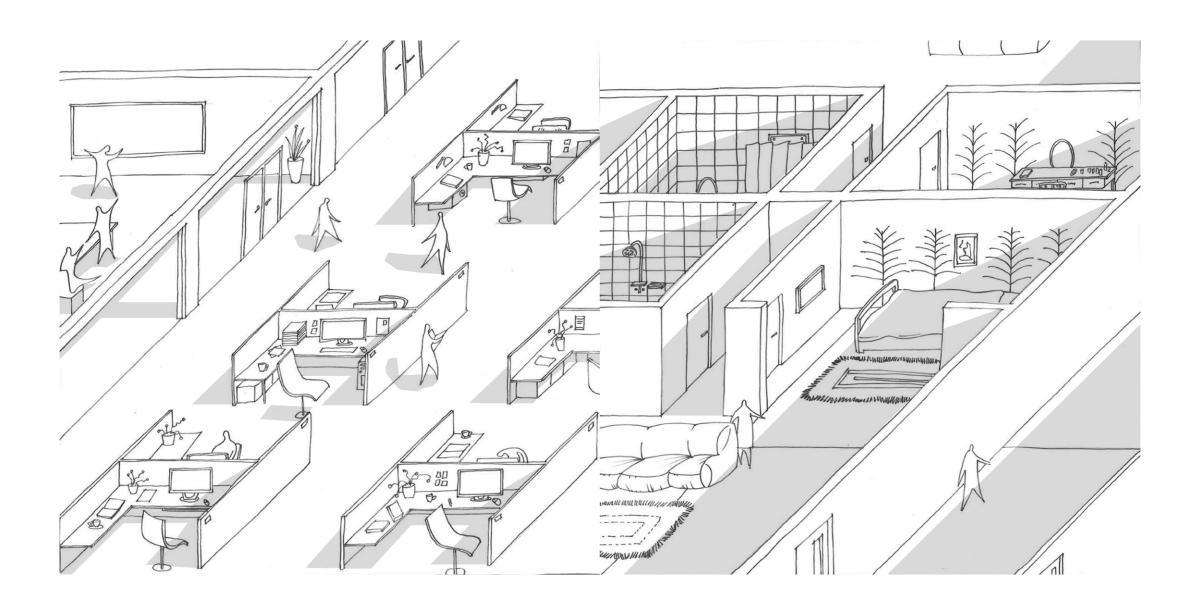

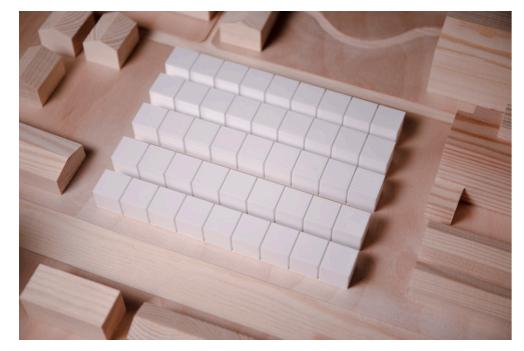

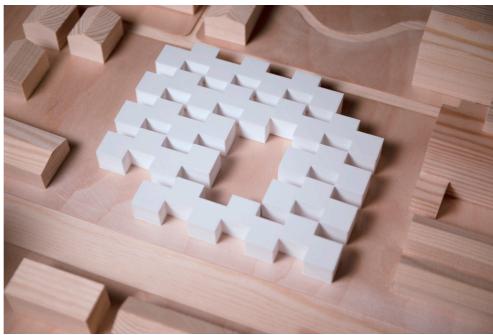

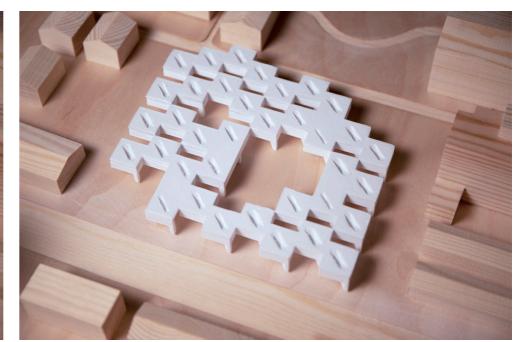

Evolution

/Residential areas are usually arranged linearly, and the roads between the houses become simple traffic spaces, driving people to pass quickly./

/Stagger the houses. The southeast corner is the main entrance for residents, and the southwest corner is adjacent to a row of shops, gathering the public. Delete these two parts of the residence to provide two plazas. Delete the central residence to provide a community plaza./

/Elevate the entire residence to create an open ground for the public. The elevated residence is more private. The open and connected roof above the residence provides space for community activities./

## Program

Site area 4800m²

32 Units

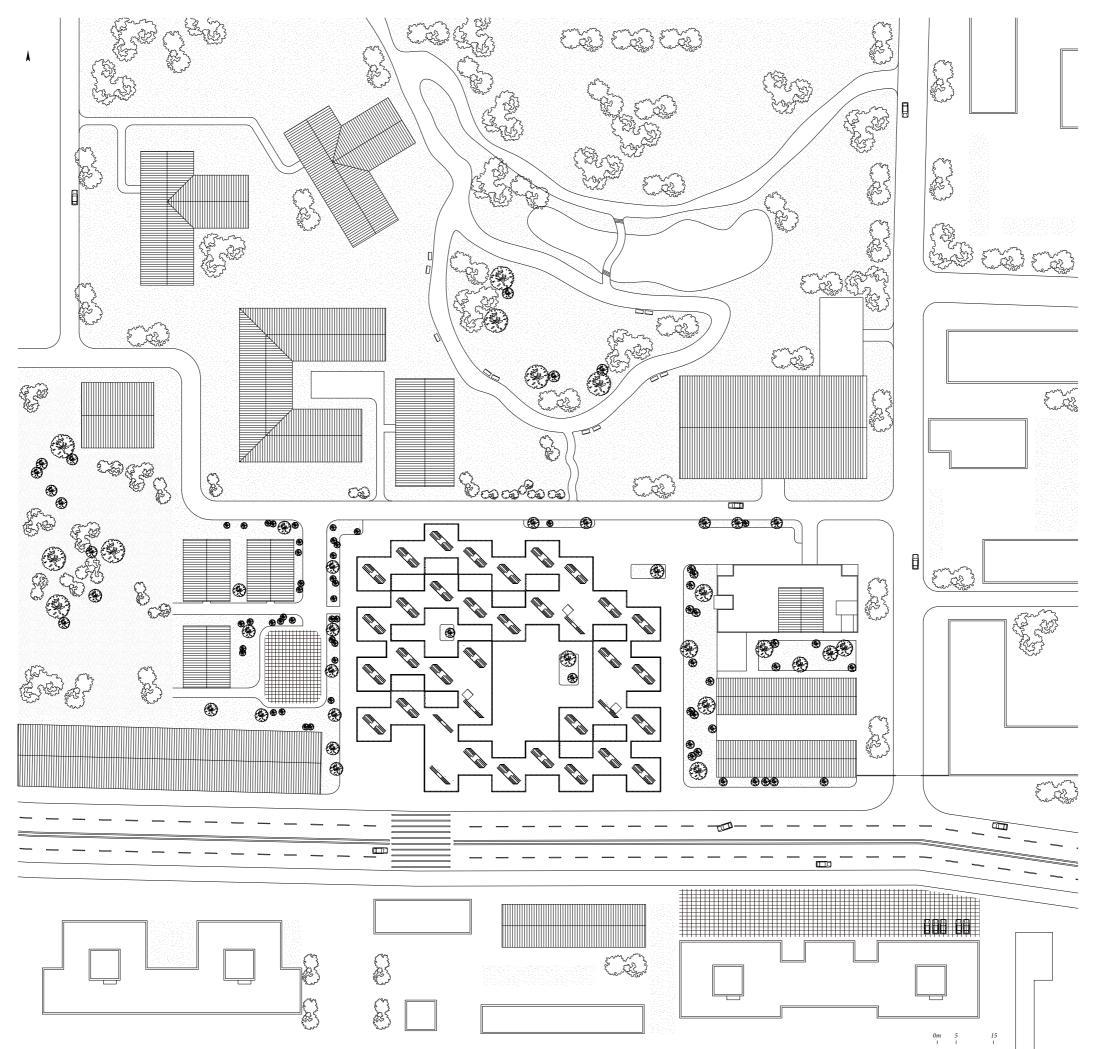

64 Apartments

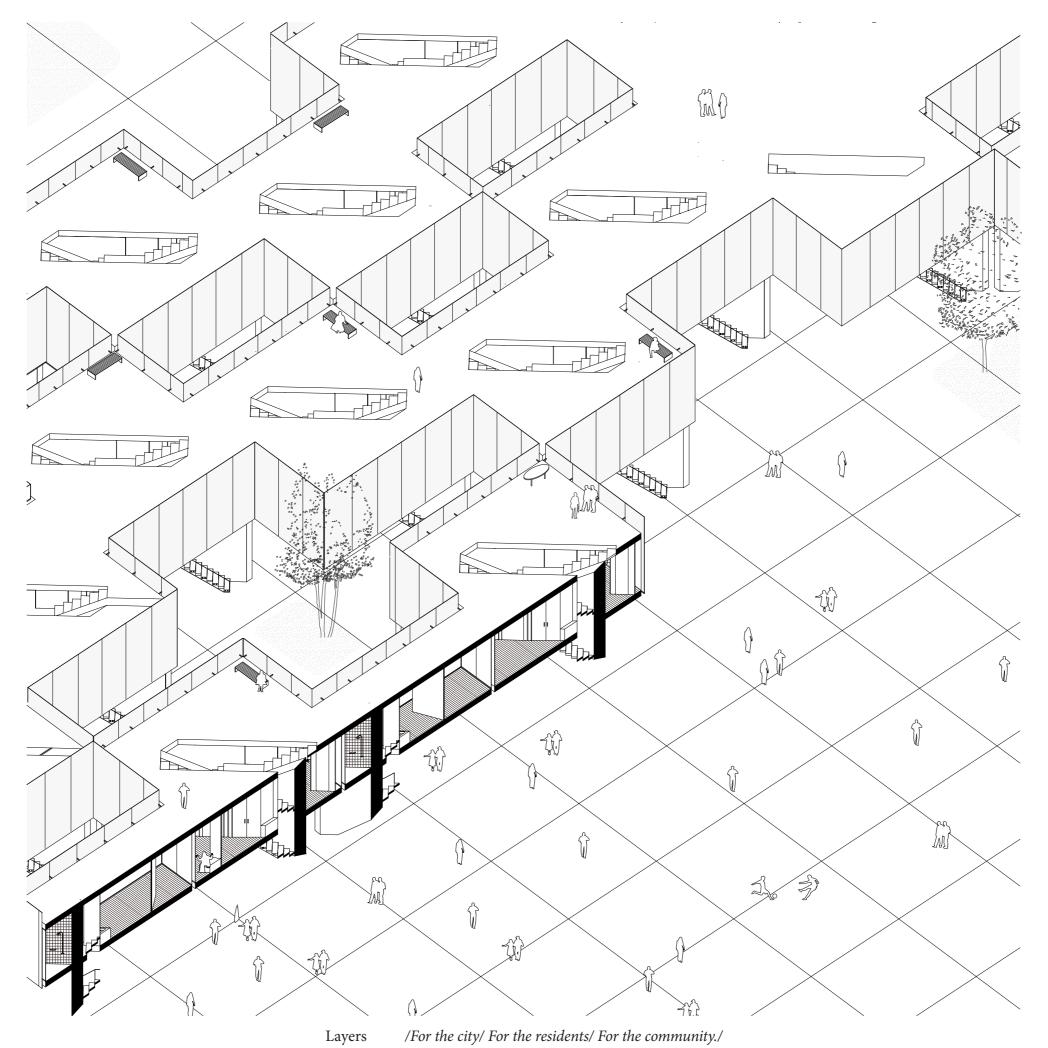

3 Community activity center

Each units 85m<sup>2</sup>

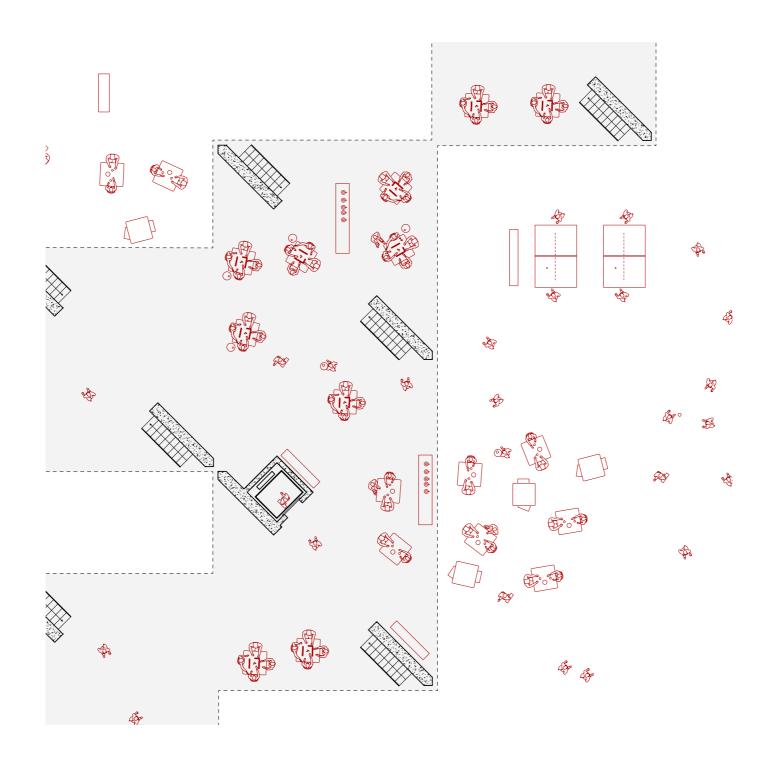

Each apartment 33m<sup>2</sup>

Each Community activity center 125m<sup>2</sup>

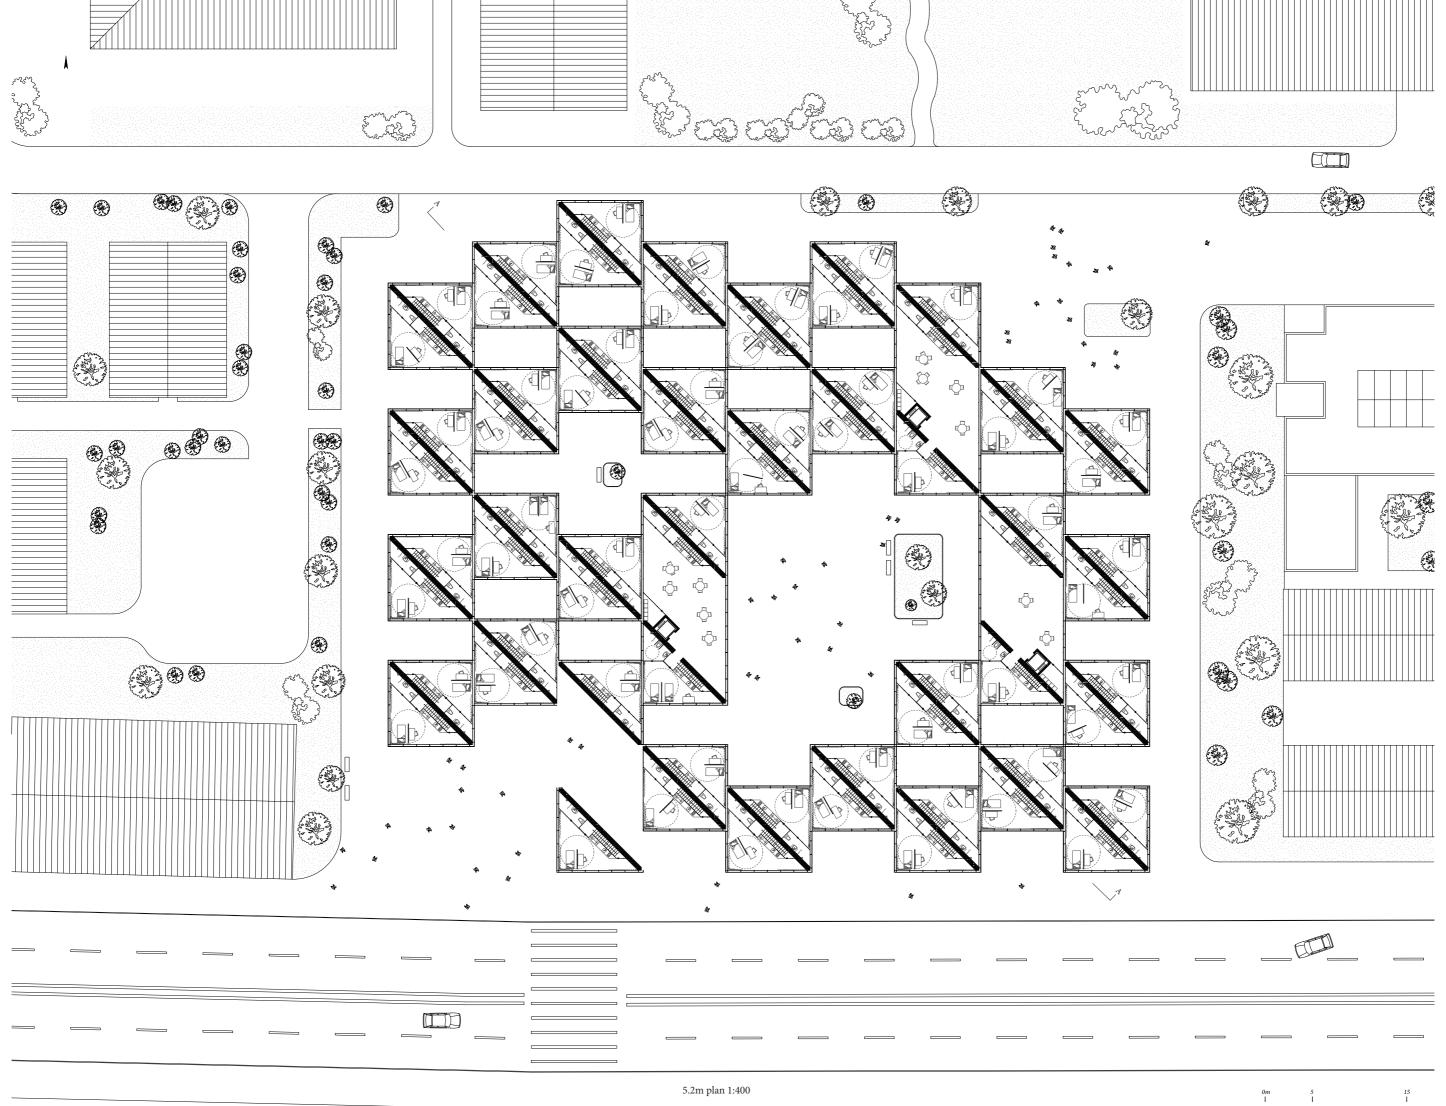

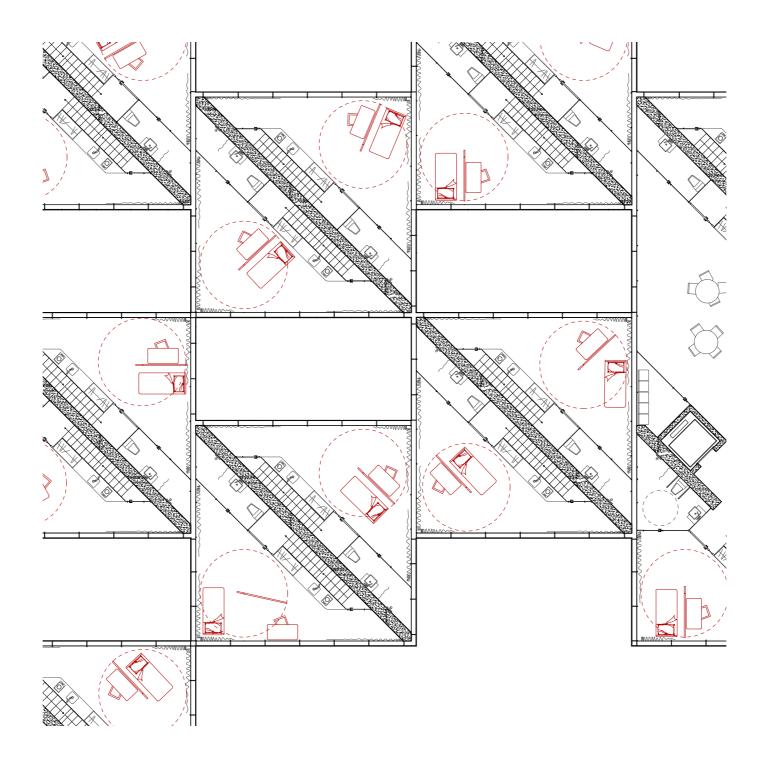

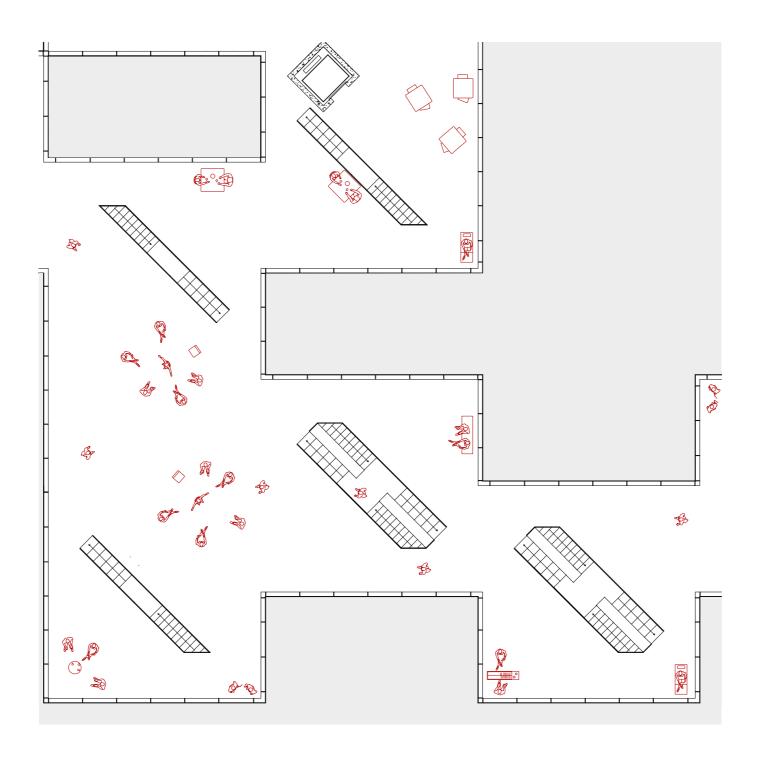

Changeable plan

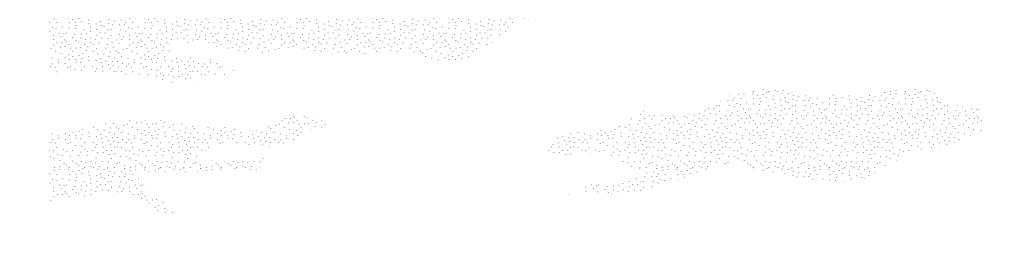

/By changing the rotating partition and curtains, the entire space can be changed according to the mood of the user. It can be very airtight, so you can sleep quietly. It can also be very transparent, allowing sunlight to fill the entire room. Even during the quarantine period, it is possible to open the curtains and make a toast with a neighbor. This is the space where you can enjoy loneliness, you can think about what you deeply want. You are protected, so you can be yourself./

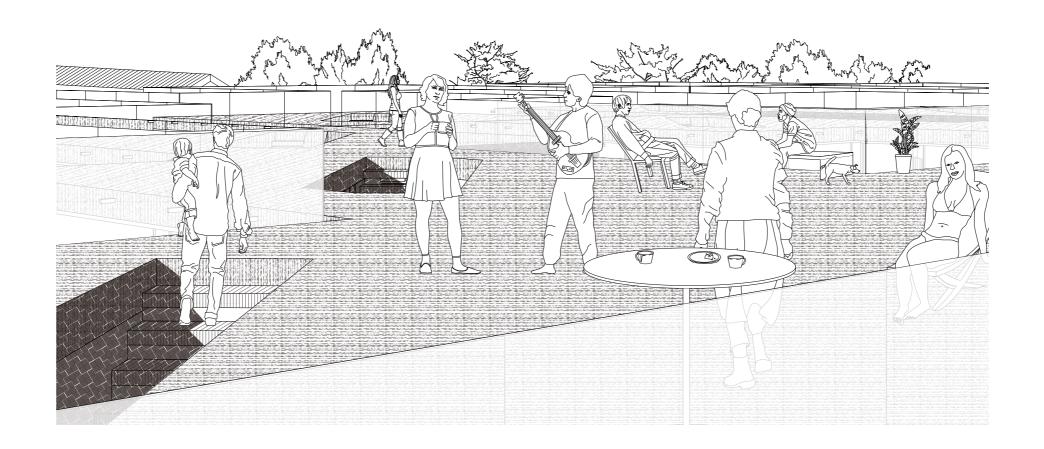

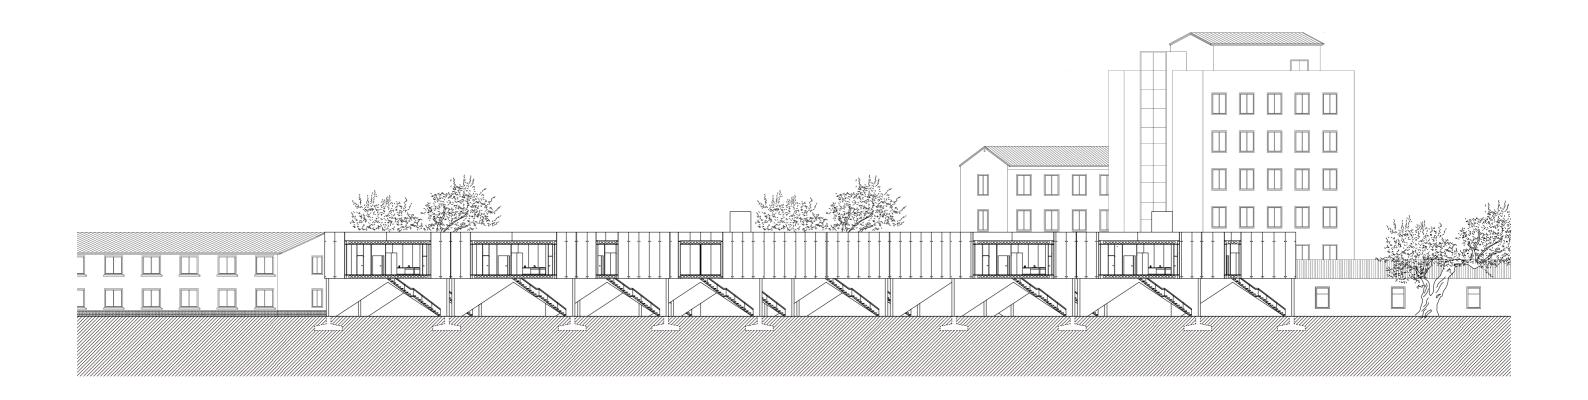

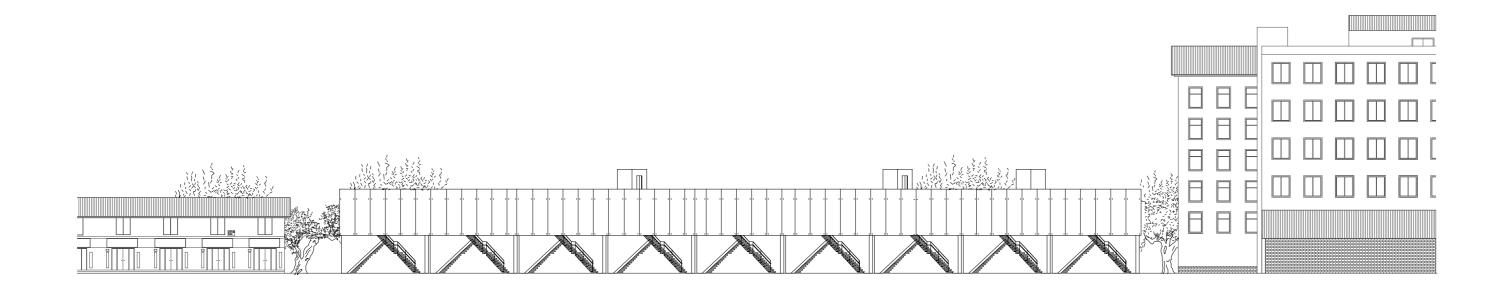

Community plan /The top space is an open space and higher than the space for the public, so it is not disturbed by people outside the community. Residents can reach this top space through private stairs. The interconnecting spaces allow the residents to enjoy the opportunity to socialize. You can easily carry a few chairs from downstairs for a barbecue party or a seminar. These stairs also provide another way to visit neighbours./

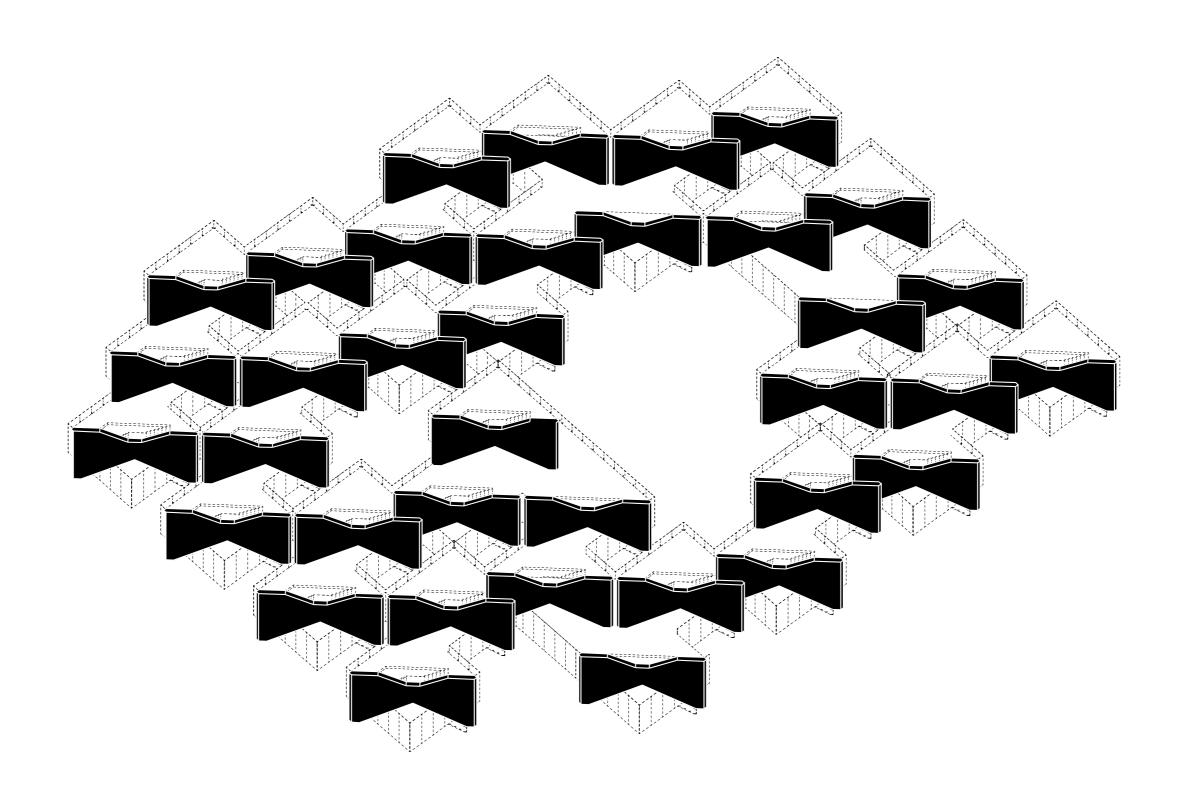

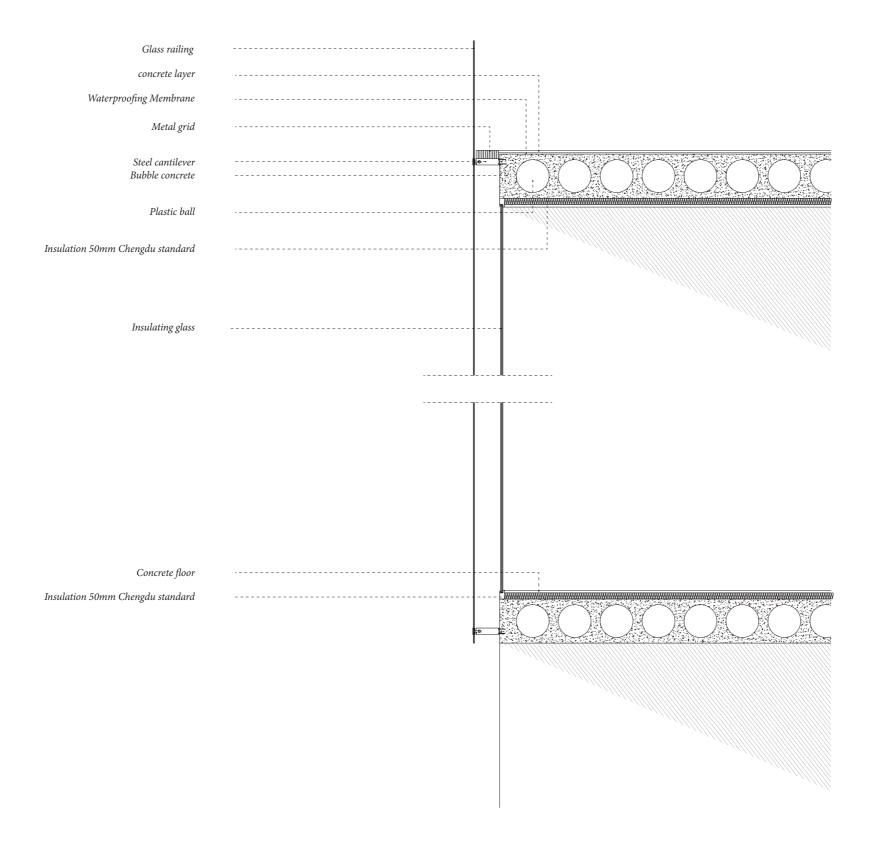

Section A-A 1:400

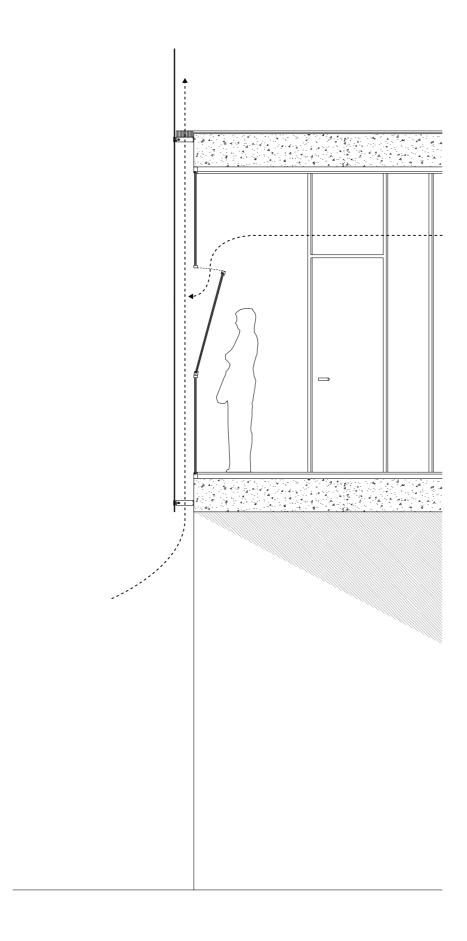

South elevation1:400

Load bearing structure /These 500mm thick concrete walls not only completely separate the left and right houses. but are also the only load-bearing structure in the entire building./
/Various pipes are also placed in these concrete walls./

Ventilation /Chengdu has hot summers and warm winters. The double skin facade accelerates the air circulation between the inner and outer glass, which is conducive to the heat dissipation of the room. The double skin facade also helps to isolate external noise and sight interference./
